MediSoft Patient Accounting

MediSoft Patient Accounting software is used for insurance claim printing, electronic claim submission, accounts receivable tracking and practice management reporting in healthcare practices and billing services. MediSoft products provide the features necessary to help physicians and billing services with their insurance claims and billing, all at an amazingly affordable price. A complete MediSoft system typically costs about one-tenth the price of other systems.

In more than eleven years since MediSoft was first released, over 130,000 systems have been purchased by healthcare practices and billing services. MediSoft offers technical support services, training, and local independent MediSoft dealers to help use the software. Someone you know is using MediSoft in their office right now -- Ask them about MediSoft's ease of use and the amazing features they got for the low price they paid!

In 1987, MediSoft was just a few people in a small start-up company. Now, the MediSoft staff numbers more than 145. In MediSoft's technical support department, there are more than 70 qualified technical support representatives available to answer your questions. Our development, quality assurance, and documentation department numbers more than 20. Each year, MediSoft hosts more than 500 days of training classes. Some astounding numbers? Absolutely. MediSoft believes that customers come first -- And so many customers came that MediSoft is the number one selling program of its type in the U.S.!

Why is MediSoft's Price So Low?

MediSoft thinks health care billing software is a tool, not a capital investment. MediSoft and other similar software are just specialized accounts receivable programs -- the same software that businesses everywhere buy for less than \$100. With MediSoft you sacrifice nothing, including powerful features, timely telephone support, local training classes and a qualified independent dealer network. With MediSoft you don't get what you pay for, you get much more! Perhaps the question should be *"Why are other healthcare programs so expensive?"*

MediSoft is Widely Known and Accepted

Over 130,000 offices have chosen MediSoft as the foundation of their patient accounting system. More MediSoft software is purchased every month than any other health care billing system. MediSoft is used in every type of health care practice including medical, chiropractic, podiatric, physical therapy and every medical specialty. MediSoft is used in every state in the U.S. and even in a few foreign countries.

Who Can Use MediSoft?

MediSoft is appropriate for any health care practice that bills for provider services. MediSoft is also popular with entrepreneurs running medical billing services either as a home-based business or in an office.

Using MediSoft in a Billing Service

MediSoft has been refined for use in a doctor's office, making it perfect for use in a billing service, too. For billing services searching for software to run their company, MediSoft is powerful and affordable. We don't sell expensive business opportunities, we sell tools for healthcare billing.

Be sure to click on the Billing Service link above for information on running a medical billing service using MediSoft.

How Do I Get Help with MediSoft?

Whether you choose to purchase MediSoft directly and install and support it yourself, or you choose to use an independent MediSoft dealer, you'll find MediSoft to be easy to learn and use.

Training

- MediSoft's user manual is written with simplicity in mind. The included tutorial helps users learn the program easily from the ground up.
- Thirty days of free 800-line telephone technical support helps users start off on the right foot. After the free support period, choose to pay for support using one of our [support options](#).
- MediSoft training classes for beginning and experienced users are held in three to six cities every week. MediSoft Training presents basic concepts and covers program setup, data entry, electronic insurance claim submission, report printing, patient billing, insurance claim submission and more. MediSoft Training also helps users understand the more powerful features of the program -- list formatting, insurance form and statement formatting, automatic payment application and more.
- More than 600 qualified independent MediSoft resellers and consultants are available to demonstrate, install, support and provide training on MediSoft products.
